

A Quickstart Guide to Value Based Care

The Fee-for-Service Model (FFS):

In the industry's reliance on the current model of payment reimbursement, FFS, healthcare providers are incentivized based on the volume or number of tests, procedures, and/or visits ordered, often in the (most expensive) hospital setting.

Value Based Care Model (VBC):

Value-based models link primary care physician reimbursement incentives to health outcomes and cost-efficiency.

Our VBC model encourages a collaborative approach to care by utilizing care coordination teams to improve member health outcomes and experience, while reducing the total cost of care.

FAST LANE

The Fee-for-Service Model (FFS):

Incentivizes volume of services provided.

Value Based Care Model (VBC):

Incentivizes cost-efficiency and quality care, and encourages collaborative care utilizing care coordination teams.
